Task 1 – Web Application Vulnerability Assessment

Objective

Assess selected in-scope web applications using Burp Suite Professional to identify, analyze and validate potential security vulnerabilities through manual and automated testing.

Methodology

- Selected in-scope targets.
- Performed reconnaissance.
- Captured HTTP requests.
- Manual testing.
- Executed Crawl & Audit.

Findings

Website	Observation	Severity
reach.l3harris.com	Authentication tested	No valid vulnerability
vdi.l3harris.com	Reflected input reviewed	Info
tracer.thorntontomasetti.com	HTTP communication	Low
supplychain.l3harris.com	TLS observation	Medium

Screenshots

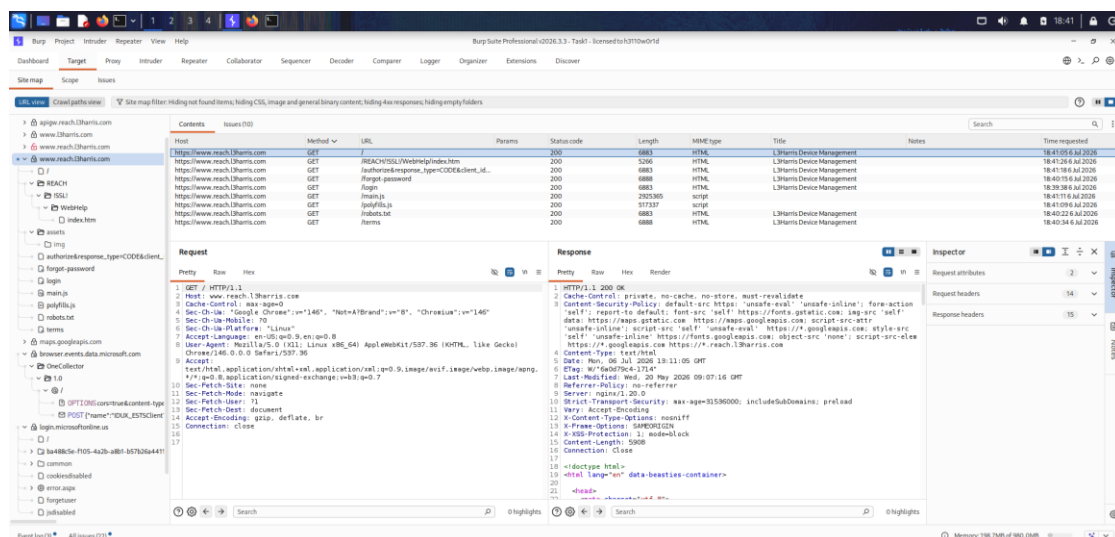

Figure 1.1: Task 1 screenshot.

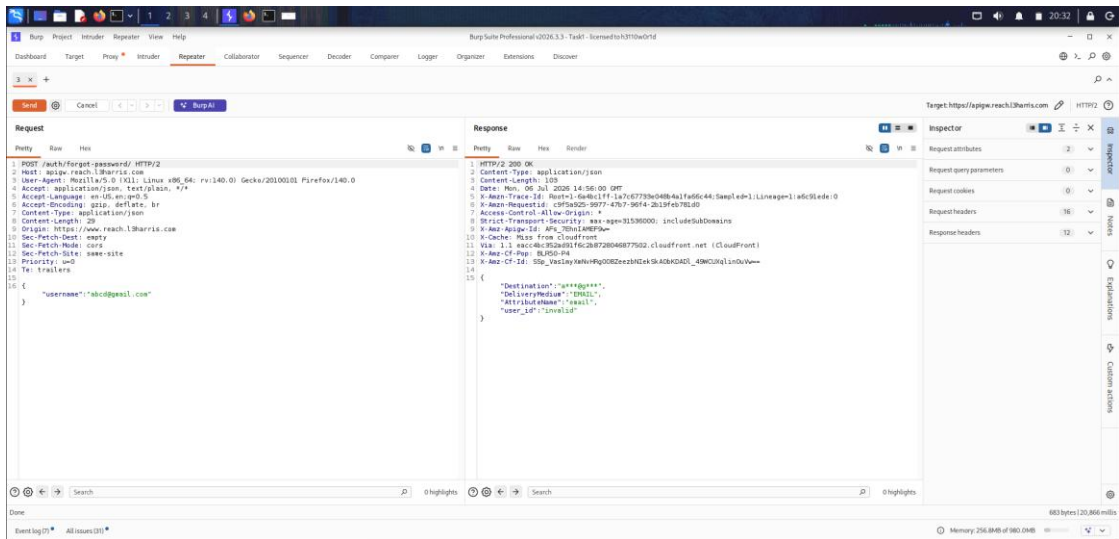

Figure 1.2: Task 1 screenshot.

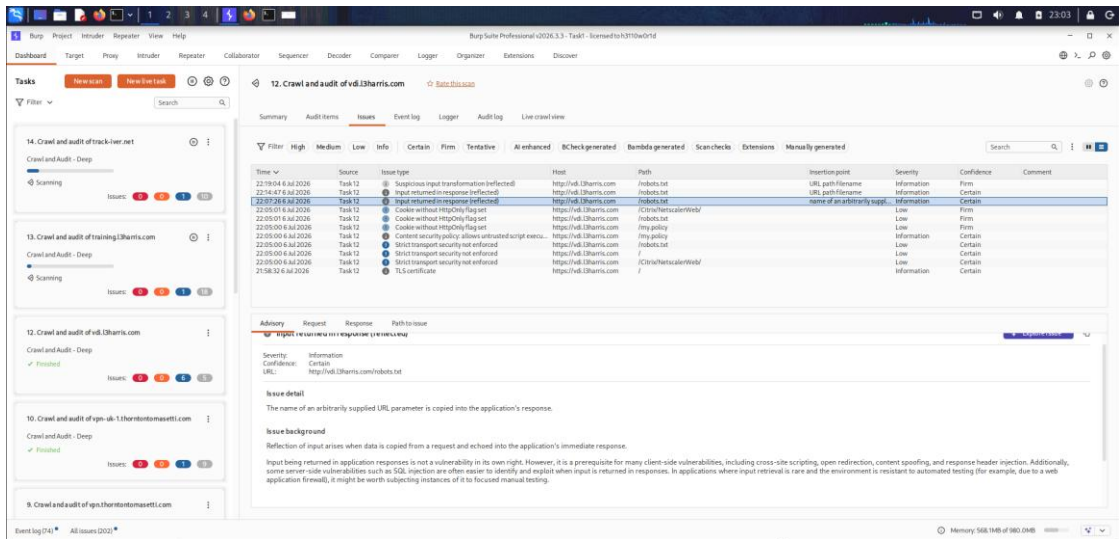

Figure 1.3: Task 1 screenshot.

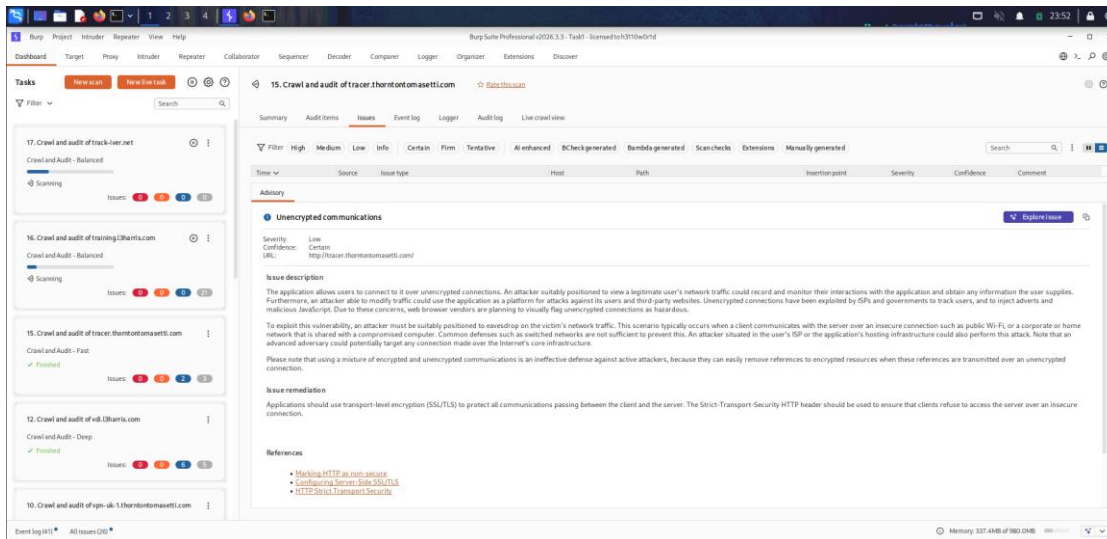

Figure 1.4: Task 1 screenshot.

Outcome

Reconnaissance, manual testing and Burp Suite analysis were completed. No reportable P4 or higher vulnerability was confirmed.

Task 2 – Linux Privilege Escalation Lab

Objective

Build and analyze a Linux privilege escalation practice environment using Ubuntu Server.

Environment

Component	Value
Platform	Oracle VirtualBox
OS	Ubuntu Server
User	analyst
Shell	Bash

Steps Performed

1. Installed Ubuntu.
2. Created users.
3. Created SecureTech directories.
4. Configured permissions.
5. Configured sudo.
6. Verified environment.

Screenshots

```
root@privesclab:~# tree /opt/securetech
/opt/securetech
├── backups
│   ├── backup.sh
│   └── log.txt
├── finance
│   └── reprt.txt
├── hr
│   └── payroll.txt
├── it
│   └── notes.txt
└──

5 directories, 5 files
root@privesclab:~# sudo -l -U analyst
User analyst may run the following commands on privesclab:
    (root) NOPASSWD: /opt/securetech/backups/backup.sh
root@privesclab:~# cat /home/analyst/user.txt
FLAG{user_enumeration_complete}
root@privesclab:~# ls -l /opt/securetech/backups
total 8
-rwxr-xr-x 1 root root 273 Jul  3 16:34 backup.sh
-rwxr-xr-x 1 root root  18 Jul  2 15:39 log.txt
root@privesclab:~#
```

Figure 2.4: Task 2 screenshot.

Outcome

The Linux privilege escalation training environment was successfully created and documented.

Commands Used

Command	Purpose
whoami	Current user
id	User info
ls -l	Permissions
sudo -l	Sudo
chmod	Permissions
chown	Ownership

Summary of Work

Activity	Status
Task 1	Partially Completed
Task 2	Completed
